(72)Name of Inventor :

**1)DHAWAN TUSHAR**

(57) Abstract :

A location reporting device implemented with a vehicle is disclosed. According to an embodiment, the disclosed device can include a scanner to receive a first signal from a token, associated with a passenger, when the token is presented to the scanner, wherein the first signal comprises a second location that the passenger intend to travel to; a controller, operatively coupled with the scanner, configured to generate second signal based on the received first signal; and a presentation unit, operatively coupled with the controller, configured to receive the second signal and provide any or a combination of a visual indication and an audio indication of the second location based on the received second signal.
