(57) Abstract :

The present disclosure provides a driving test simulation apparatus. The disclosed apparatus comprises: a Virtual Reality (VR) headset having a processor that is operatively coupled with a memory, said memory storing computer-implemented instructions which when executed by said processor enables a user that is wearing the VR headset to undertake simulation of a driving test; a 3D-printing based steering wheel operatively coupled with said VR headset, said steering wheel being used by said user to manoeuvre driving route that forms part of the driving test; and at least two 3D-printing based pedals operatively coupled with said VR headset and said steering wheel, said pedals being used by said user to control acceleration or braking during driving along said route.
