(57) Abstract :

The present disclosure provides a device for monitoring health parameters. The disclosed device comprises: a set of sensors configured to sense one or more health parameters of first user and generate one or more first signals associated with each of the corresponding one or more health parameters; a control unit operatively coupled with the set of sensors, the control unit configured to: receive the amplified one or more first signals; retrieve value of the one or more parameters from each of the corresponding one or more first signals; store the retrieved value of parameter on a first database; and wherein the first database is operatively coupled to a second computing device to enable access for the second computing device to the values stored on the database.
