(57) Abstract :

According an embodiment, the present disclosure provides a toilet assembly. The assembly includes a commode, a footstep pivotally coupled to move between a folded position in which the footstep is folded along the commode, and a deployed position in which the footstep is oriented horizontally to support foot of a user sitting on the commode. A lifting mechanism arranged between the footstep and the commode to enable movement of the footstep in between a first position and a second position, wherein the first position corresponds to a position in which the footstep is lifted to an upper end of the commode, and the second position corresponds to a position in which the footstep is lowered to a bottom end of the commode.
