(57) Abstract :

The present disclosure relates to a service requesting device associated with a vehicle and a method thereof. The device includes: a set of sensors to sense a real-time location of the vehicle; and a control unit operatively coupled with the set of sensors, the control unit comprising a processor coupled to a memory storing instructions executable by the processor to: receive a set of data packets pertaining to a request for a service from a computing device associated with a user, wherein the request comprises a first set of attributes such as at least a second set of attributes selected from the first set of attributes pertains to location of the requested service; and responsive to the requested service, display on the computing device, one or more vendor entities and associated location of each of the one or more vendor entities within a distance determined by comparing the second set of attributes with the sensed location of the vehicle.
