(57) Abstract :

The present invention discloses a simple and effective wearable apparatus for mobilising chest secretions to give treatment to patients without requiring any physical efforts from the physiotherapist. The apparatus comprises an inner side layer and an outer side layer; one or more vibrating elements configured to any of the inner side layer and the outer side layer for generating vibrations; a potentiometer is operatively coupled with the vibrating elements to control intensity of the generated vibrations of the apparatus; a display unit operatively coupled with the potentiometer to display real time intensity of the generated vibrations of the apparatus.
