Filing Date	:NA	

(57) Abstract :

The present disclosure pertains to a marking device 100 for E presentations. The device 100 includes a set of input units 102 configured to detect one or more operations associated with a user, and correspondingly generate a first set of signals. A control unit 106 operatively coupled with the set of input units 102 , and configured to extract a second set of signals from the first set of signals, where the second set of signals pertain to selection of one or more modes. A set of output units 104 operatively coupled with the control unit 106 , where at least one output unit from the set of output units 104 is configured to operate in at least one mode among the selected one or more modes based on the extracted second set of signals. The device 100 includes at least one input unit which is detachable. The device is portable and multifunctional.
