(57) Abstract :

A portable beverage preparing device is provided. The device comprises a lower tank and an upper tank. The lower tank comprises a brewing unit and the upper tank is removably mounted on the lower tank. The upper tank comprises a first section for holding water, a second section for holding milk. A second section is physically separate from the first section. A third section holds sugar and tea leaves in separate compartments. A vertical pipe is attached to an inner surface of the upper tank with an opening in each of the sections. The water from the first section, the milk from the second section and any or a combination of the sugar and tea leaves held in the separate compartments from the third section respectively are dispensed into the vertical pipe, and passed down from the vertical pipe to the mounted lower tank for brewing and preparing the beverage.
