(57) Abstract :

The present disclosure relates to an apparatus (100) for monitoring body temperature, the apparatus comprising: a shield (102) adapted to be worn on a face of a user, the shield coupled with a frame (112), the frame adapted to fit over head of the user; a sensor (106) configured to, upon activation, detect temperature of the user, a display device (104) provided on the shield; an audio device (204) provided on the frame of the apparatus; a processor operatively coupled to a memory, the memory storing instructions executable by the processor to: receive, from the sensor, upon activation of the sensor, a set of signals pertaining to temperature of the user; extract, from the received set of signals, a value of the temperature of the user, wherein the processor is configured to instruct the display device and the audio device to indicate the value of the temperature of the user.
