(57) Abstract :

An apparatus is provided for granting entry permission to an entity. The apparatus comprises a temperature sensor for capturing and determining a body temperature of the entity upon the apparatus being pointed towards head of the entity. Also, is provided a bar code scanner having a scanner that is enabled to read different bar code symbologies or types representing a subset of all bar code symbologies present on an identification card associated with the entity for authenticating the entity. Upon determination, that the captured body temperature is within a predetermined range and a positive authentication of the entity, granting the entry permission to the entity and activating a sanitizer dispenser for allowing automatic dispensing of sanitizer.
