(57) Abstract :

A method and a system are provided for translation of a set of characteristics of a data packet. In an embodiment, the method comprises receiving a plurality of first set of data packets at a processor. The plurality of first set of data packets have a second set of data packets and a third set of data packets. The second set of data packets includes a set of instructions indicative of a first set of characteristics. The third set of data packets includes a set of instructions indicative of the second set of characteristics. At least one or more of the second set of characteristics are translated into a third set of characteristics, and at least one or more of the first set of characteristics are translated into the third set of characteristics. Further, a source file indicative of third set of characteristics is generated for compilation.
