(57) Abstract :

The present disclosure pertains to a device (100) to facilitate screening for an entity, the device (100) includes a temperature sensor (102) configured to generate a set of temperature signals associated with temperature of the entity, at least one alarm units (110), a display unit (112), a scanning unit (108), a positioning unit (106) and a processing unit (104). The processing unit (104) is configured to receive the set of temperature signals and determine from the set of temperature signals a first temperature limit and a second temperature limit, where the second temperature limit exceeds the first temperature limit. When sensed temperature of the entity reaches the second temperature limit, the processing unit is configured to transmit a set of alert signals to at least one of the alarm units (110) and the display unit (112). The processing unit (104) is configured to authenticate adhar identity associated with the entity, only when the second temperature limit is reached.
