(57) Abstract :

The present disclosure discloses a device 100 for facilitating cleaning and sanitizing of edible products. The device 100 can include a casing 102 for accommodating edible products, such as vegetables and fruits. The device 100 can include valves 106 to facilitate inflow and outflow of a fluid to and from the casing 102, respectively. The device 100 can include a motor 104 to facilitate rotation of the edible products and the fluid that facilitates cleaning and sanitizing of the edible products. The device 100 can include a heating element 110 to enable heating of the fluid. The device 100 can include a sensor 108 and a control unit 112, where the sensor 108 can sense weight of the edible products, and correspondingly the control unit 112 can control parameters of the device 100, such as speed and time of operation.
