(57) Abstract :

The present disclosure relates to an apparatus (100) for treatment of foot part of user, the apparatus includes a housing (102) adapted to accommodate foot part of the user, one or more tanks (104) adapted for storage of fluids, one or more nozzles (108) adapted to supply fluids received from the one or more tanks, one or more brush elements (110) adapted to treat the foot part of the user. A control unit (114) operatively coupled to a thermoelectric device (106) and motor (116), the control unit configured to operate, the thermoelectric device, to heat the fluids in the one or more tanks, and operate, the motor, to rotate the one or more brush elements in the desired direction to treat the foot part of the user, the treatment facilitates the cleaning and massaging of the foot part of the user.
