(57) Abstract :

The present disclosure relates to a method including saving, at a processing unit, one or more attributes of a user. Receiving, at the processing unit operatively configured with one or more servers, from an input unit associate with a device a first set of data packets. The first set of data packets pertain to an amount and a type of investment a user wants to do. Sending, by the processing unit, to an output unit associated with the device a second set of data packets based on the first set of data packets. The second set of data packets pertain to an investment schemes with high return values. The investment schemes with high return values are selected on the basis of a comparison between data received from servers; and selecting, on the input unit, one of the plurality investment schemes based on the attributes of the user.
