(57) Abstract :

The present disclosure relates to a system (100) for authentication of user session, the system includes an information input unit (102) adapted to receive one or more images from user to authenticate user session. A processor (104) operatively coupled with a memory (106), said memory storing instructions executable by the processor to: receive, from the information input unit, the one or more images, analyse, the received one or more images to extract a set of values from the one or more images, and determine, the extracted set of values based on matching of the extracted set of values with a reference set of values, wherein, based on the matching of the extracted set of values of the one or more images from the reference set of values, the processor (104) is configured to authenticate access to the user session.
