(57) Abstract :

The present disclosure relates to a massager (100) for massaging body part of user, the massager (100) includes a handle (102) adapted to hold the massager, and a housing (104) coupled to the handle to provide massage, said housing (104) includes a circular massaging surface (106) adapted to accommodate plurality of protruding elements (118), an absorbing element (108) for absorbing and dispensing the fluid, a cover (110) with plurality of holes (128) to dispense the fluid through the plurality of holes, and a motor (112). The motor (112) activates by turning on the switches coupled to the massager, and upon activation the motor (112) rotates the housing (104) to massage the body part of the user through the protruding elements (118). Also, the fluid dispenses from the absorbing element (108) upon squeezing the absorbing element (108) through a body part of the user to assist in massage.
