(57) Abstract :

The present disclosure pertains to a cooking appliance (100). The cooking appliance (100) includes a panel (102) configured with an outer surface and operatively coupled to one or more heating elements, and a foldable plate (104) coupled to the panel (102) , wherein the foldable plate (104) is configured to move from a first pre-defined position to a second pre-defined position, and where the one or more heating elements are configured to heat the foldable plate (104). The first pre-defined position of the foldable plate (104) is below the panel (102) and the second pre-defined position of the foldable plate (104) is above the panel (102), and where the foldable plate (104) is moved from the first pre-defined position to the second pre-defined position through at least one roller (106). The first pre-defined position is a contracted position of the foldable plate (104) and the second pre-defined position is an extended position of the foldable plate (104).
