(57) Abstract :

The present disclosure relates to an apparatus (100) for balancing involuntary muscle contraction of user, the apparatus including a frame (102) that includes a plurality of compartments (104) adapted to be worn on hand part of a user, one or more receiving elements (110) adapted to receive one or more weights (108) in each of the plurality of compartments, wherein one or more weights in each of the plurality of compartments are received by each individual joint of the hand part. A fastening element (106) coupled to each of the one or more receiving elements, the fastening element adapted to secure the one or more weights received in each of the one or more receiving elements, to stabilize each individual joint of the hand part to balance the involuntary muscle contraction of user.
