(57) Abstract :

The present disclosure pertains to a health monitoring and sanitizing system (200) for a non human entity (110). The system (200) includes a device (108) with first set of sensors (202) configured to detect temperature and a second set of sensors (204) configured to detect health parameters of the non human entity (110) and an alert unit (212). The system (200) includes a passage with a third set of sensors (206) configured to sense the non human entity (110) and a sanitization unit 210 configured to sanitize the non human entity (110). The system (200) includes a processing unit (208) which facilitates generating a set of alert signals when the temperature and the health parameters are found beyond predetermined limit .The processing unit (208) facilitates actuating the sanitization unit (210) upon sensing the non human entity (110) on the passage. The system (200) helps in suggesting diet plan and health advice to owner of the non human entity (110).
