(57) Abstract :

The present disclosure relates to an apparatus (100) for measuring growth of users, the apparatus includes a sensor (104) configured on a frame (102), the sensor configured to, upon activation, detect growth of the user in a vicinity of the sensor, wherein the sensor is activated by operation of a switch (106). A processor (120) operatively coupled with the sensor, a display unit (104) and an audio unit, the processor configured to receive, from the sensor, upon activation of the sensor, a set of signals pertaining to any or a combination of height and weight of the user, and extract, from the received set of signals, a value of the received set of signals of the user, to instruct the display unit and the audio unit the value of the received set of signals of the user.
