(57) Abstract :

The present disclosure relates to a system (100) for providing ammunition training to user, the system includes a laser source (102) adapted to emit a set of signals. A frame (112) adapted to accommodate a plurality of light detectors (104). One or more targets presented in a particular target sequence is configured in the frame (112), an audio device (110) configured on the frame. A processor (106) configured to receive, by the plurality of light detectors, the set of signal emitted from the laser source, detect, the received set of signals, to determine the hit location of the set of signals on the one or more targets, further, upon hitting the one or more targets, the processor is configured to operate the audio device to emit sound.
