(57) Abstract :

The present disclosure relates to an apparatus (100) for protecting user from impurities, the apparatus includes a frame (102) adapted to be worn on a mouth part of a user, the frame coupled with at least two loops (108) transversely extending from side edges of the frame, the at least two loops adapted to fit over ear part of the user. An aperture (104) configured in the frame, the aperture adapted to receive a delivering device, the delivering device adapted to supply fluids to the user, and a lid (106) coupled to the aperture, the lid adapted to open and close the aperture, wherein, the fluids are received by the user from the delivering device through the aperture, without the removal of the frame from the mouth part of the user.
