(57) Abstract :

An electric tiffin (100) comprising: a base container (102) having a socket (122) such that the socket is connected to a power cord (101), to receive a power supply to generate a thermal energy to heat food items placed inside the base container (102); a middle container (104) vertically stacked onto the base container (102) by using a locking element, to receive the thermal energy from the base container (102) through a first contact point (126) to heat the food items placed inside the middle container (104); and a top container (106) vertically stacked over the middle container (104) to receive the thermal energy from the middle container (104) through the second contact point (128), wherein the top container (106) is adapted to rotate at a predefined angle to switch from a heat mode to a normal mode.
