(57) Abstract :

The present disclosure pertains to a holographic screen creation system (100) and method (400). The system (100) includes a first screen (102), a second screen (104), a processor (106), and an illumination source (108). The first screen (102) is associated with a computing device, where the first screen facilitate displaying a two dimensional visual attributes, where the first screen (102) includes an outer layer and an inner layer. The illumination source (108) is configured within the first screen (102), where the illumination source (108) facilitate illuminating an area of interest inside the inner layer of the first screen (102). The processor (106) is operatively coupled to the first screen, and facilitate displaying holographic view on outer layer of the first screen, and enables creation of a second screen. The second screen (104) is created such that internal reflection of the illumination source (106) creates a holographic image on outer layer of the first screen (102) and on surrounding sides to give a three -dimensional view.
