(57) Abstract :

An oral care assembly (100) includes a housing (102), the housing (102) includes a first compartment (104) for storing a toothpaste and a second compartment (106) for storing a cleaning liquid. A holder (112) removably fitted to the housing (102) for accommodating one or more oral care objects such as toothbrush tongue cleaner, and dental floss. The toothpaste dispenses from the first opening (114-A) upon pressing the first compartment (104), and the cleaning liquid dispenses from the second opening (114-B) upon actuating an actuator (108). A human machine interface (HMI) (202) configured with the housing (102) for alerting an entity to change the toothpaste, the cleaning solutions and any of the oral care objects when expiry date is near. Also, the HMI (202) facilitates in reminding the entity to refill the toothpaste and the cleaning liquid in their respective compartments when the quantity is not sufficient.
