(57) Abstract :

The present disclosure pertains to a drafting tool for designing purpose. The drafting tool (100) includes a first section including a T scale (102) configured to draw horizontal lines on a drawing representation medium. The drafting tool (100) includes a second section including a protractor (104), and a scale (106). The protractor (104) is configured to measure and mark one or more angles on the drawing representation medium. The scale (106) is movably coupled to the protractor (104), where the scale (104) facilitates in drawing straight lines for marked one or more marked angles. The second section is configured to slide horizontally on the first section through a string (108). The scale (106), and the protractor (104) are movably coupled, and the scale (106), and the protractor (104) are configured to slide horizontally on the T-Scale (102) with assistance of the string (108).
