(57) Abstract :

The present disclosure relates to an apparatus (100) for dispensing fluids, the apparatus comprising a reservoir (106) comprising one or more separators (108) defining one or more compartments (110-1, 110-2) adapted for storage of fluids. A dispensing unit (104), upon activation of one or more actuators (112-1 to 112-3), configured to allow the flow of fluids and a drying unit (114) upon activation of corresponding one or more actuators, configured to supply hot air, wherein, upon activation of corresponding actuators, the dispensing unit configured to permit the flow of any or a combination of fluids from the corresponding one or more compartments to clean body parts of a user, the fluids pertaining to any or a combination of liquid and cleansing agents, and wherein, upon activation of corresponding actuators, the drying unit configured to supply hot air to dry the body parts of the user.
