(57) Abstract :

The present disclosure pertains to a mattress 100 for controlling temperature of the mattress 100, and providing massage to a user. The mattress 100 comprising heating means 102 such as heating pads positioned across the mattress 100, an interface 106 that facilitate in providing one or more commands to control one or more operations, and a processing unit 118. The processing unit 118 is configured to heat the heating means 102 to a temperature set by a user from the interface 106. The mattress 100 also include massaging assembly 110 that facilitate in providing massage to one or more body parts of the user. Also, the mattress 100 facilitates in awakening the user on a pre-set time by disturbing sleep of the user lying on the mattress.
