(57) Abstract :

The present disclosure relates to a device (100) for controlling geyser, the device includes a time selection unit (102) comprising a stage selection switch (104) to set temperature parameters at corresponding time intervals based on water level in a tank, the tank having a heating element; and a controller (106) operatively coupled to the time selection unit, the controller unit configured to receive, from the time selection unit (102), the temperature parameters at corresponding time intervals based on water level in the tank; and extract, from the temperature parameters, a set of values for the temperature parameters, wherein based on the extracted set of values of the temperature parameters, the controller configured to control the temperature of water at corresponding time intervals based on the requirement of the water level in the Tank.
