(57) Abstract :

The present disclosure relates to a device adapted to be configured inside the vehicle. The device includes a global positioning sensing (GPS) unit. A processor operatively configured with the GPS unit, and configured to execute a set of instructions, stored in a memory, which, on execution, causes the processor to receive, from the GPS unit, a set of first signals pertaining to location of the vehicle after a pre-define period of time. Receive, from an ECU unit of the vehicle, a set of second signals pertaining to one or more parameters of the vehicle. The one or more parameters are related to health of the vehicle, and notify, based on the set of first signals and the set of second signals the one or more options to the user.
