(57) Abstract :

The present disclosure relates to a system (100) for rescheduling task of an employee based on location. The system (100) can receive location information of the employee and analyse traffic conditions of the received location information to detect time to reach office by the employee, and the traffic conditions can be analysed using learning techniques. The system (100) is further configured to reschedule tasks such as meetings and projects allocated for the day, upon detection of one or more traffic conditions on route of the employee. Also, the employee is enabled to generate a ticket to inform the system (100) about late coming to the office due to traffic condition, and the system (100) match the given reason with traffic condition of the route of the employee to check whether the reason is factual.
