(57) Abstract :

The present disclosure provides a vacuum cleaner with recycled parts. The vacuum cleaner includes, container, one or more exhaust fans, handle, one or more pipes and one or more gears. The container may comprise of a first compartment and second compartment. First compartment may comprise of the one or more exhaust fans, operatively coupled to the handle, using the one or more gears. One or more pipes may be operatively coupled to the second compartment and attached to the first compartment. One or more exhaust fans may start rotating when the handle is manually rotated, causing a suction force to be created. The suction force, may help suck the dust in through one or more pipes. The sucked in dust, may be stored in the second compartment, and may be disposed by detaching second compartment from the container. The parts such as the container and pipes, may be recycled material.
