(57) Abstract :

The present disclosure relates to a device (100) to detect medical condition of a woman in pregnancy especially gestational diabetes mellitus (GDM) and hypothyroidism. The device (100) facilitates in connecting the woman with a healthcare professional using an interface provided on the device (100). The device include an input unit (106) configured to receive medical information such as medical reports and values of health parameters. Further, the received medical information can be analysed, and upon detection of any health parameter beyond a pre-defined range, a health professional is notified that check medical condition of the woman and correspondingly recommend ne medications, diet and exercise.
