(57) Abstract :

The present disclosure provides a system 100 to be coupled to an agricultural vehicle such as tractor trolley to reduce moisture in an agricultural product such as rice paddy, and etc. stored in the agricultural vehicle. The system 100 can be configured to reduce moisture content of a large amount of agricultural product automatically without any human intervention, thus save time, and manual efforts. The system 100 can include sensors 106 to detect moisture in the agricultural product stored in the paddy, and according a peltier unit 108 can generate heat that facilitates in reducing the moisture.
