(57) Abstract :

The present disclosure relates to a wearable medication organiser 100, enabling a user to conveniently carry medication and to remind the user when to take the medication. The wearable medication organiser 100 includes a plurality of compartments 106 to store medications, and adapted to be wrapped around the wrist as a watch. At the time of medications the wearable medication organiser 100 vibrates to remind the user to take medications, and enables the user to take medications from a pre-defined compartment 106 only. In addition, when any of the compartment 106 is found vacant, the user is notified to refill the compartment 106. Also, the wearable medication organiser 100 is communicatively coupled with a server 202, and one or more mobile computing devices 206, which enable entities to store details in a controller 114 such as number of medications and time to consume medications based on a regimen.
