(57) Abstract :

The present invention relates to an audio-video doorbell system (100). The system (100) includes a housing (102) positioned at an inside wall of a house and an outdoor unit positioned at an entrance. The housing (102) and the outdoor unit are communicatively coupled to each other by a communication unit (116). The housing unit (102) accommodates an audio device being configured to produce an audible notification, a display device (106) being configured to display one or more information such as time, date or the like, and one or more sensors (108) configured to detect one or more attributes of environment that are displayed on the display device. In addition, the outdoor unit comprises a switch (110) and an image capturing unit (112), upon activation of the switch, the image capturing unit (112) obtains video data of a pre-defined area and displays the video data to the display device (106).
