(57) Abstract :

Spectacles (100) comprising: a frame (102) designed to hold lenses in place, end pieces (104a-104b) located on a rear side of the frame (102), and coated with a ferromagnetic layer; temples (108a-108b) having end faces coated with the ferromagnetic layer; pins (110a-110b) provided at the end faces of the corresponding temples (108a-108b); magnets (112a-112b) assembled in between the temples (108a-108b) and the end pieces (104a-104b) of the frame (102), to provide a required force to hold the temples (108a-108b) and the frame (102) together, wherein each of the magnets (112a-112b) are having a first hole (114) to fit the pins (110a-110b) of the temples (108a-108b); and a second hole (116) provided at each of the end pieces (104a-104b) of the frame (102) to accept the pins (110a-110b) of the temples (108a-108b) for removably attaching the temples (108a-108b) to the frame (102) of the spectacles (100).
