(57) Abstract :

A mobile phone holder (100), comprising: a base (102) configured to provide support to components of the mobile phone holder (100); a bearing (104) bolted over the base (102), and facilitates a rotational movement of a spindle (106), wherein the rotational movement of the spindle (106) enables a rotational movement of a top surface (108) of the mobile phone holder (100) at any angle; and phone pockets (110a-110b) provided on the top surface (108) of the mobile phone holder (100), to hold two mobile phones simultaneously, such that an angle of view of the two mobile phones is adjusted by rotating the top surface (108) of the mobile phone holder (100) at any angle.
