(57) Abstract :
My invention ITV -OPERATOR We are making a software/Application which performs the task related to cable operating system. Our cable operators or television providers makes data of all television users and completes the user requirements. Like they gave us family pack of channels to choose some channels which users are going to watch then they shows only that channels which are selected by user. Then user pay for only view that selected channels in per second. When user have any problem then they contact with cable operator and then that cable operators solves that query or problem, also for paying bill of cable connection user needs to go in cable operator office and pay it otherwise cable connection providers has to come to users home for bill payment or user can pay bill directly through this application. When user wants to deactivate channel, add channel, change pack, selected any special program in time only then he has downloaded the mobile aaps and according can change all rights available. For avoiding these so many things we are making a Application which gives user all rights like selecting channels, deactivating connection, bill payments and etc. also user only any specific channel can open in a single day so they can pay only single day bill.
