(57) Abstract :
The present disclosure relates to a system and method (100) for recommending academic institutions. The system (100) is provided a housing (102) where a data storage unit (104), a recommending unit (106), and a processing unit (108) are configured. The data storage unit (104) is configured to receive and store input of an user's personal data which has selected data about the academic university the user wants to apply to, while the recommending unit (106) is configured to provide recommendation of an academic institution based on the information received by the data storage unit (104). Additionally, the processing unit (108) is configured to access the semi structured data, extract generative features, and identify meaningful trends, structures, and group results using one or more steps. Finally, the processing unit (108) provides information to the user on the potential employment opportunities, way of travel, and accommodation through an external device (110) and stores the information on the server (112).
