(57) Abstract :

The proposed invention discloses an assembly 100 for lifting a patient from a hospital bed. The assembly 100 includes a bed frame 102, having a first part 104 and a second part 106, where the first and second parts are separated and joined by an attendant while lifting and placing the patient in the hospital bed, the attendant easily moves the patient to the bedframe 102. Additionally, the assembly 100 includes a frame 112 to provide support to a front end of the bed frame, and a lifting mean 124 attached to a rear end of the bed frame. Also, a pedal 128 attached to the lifting mean 124, and upon pressing the pedal, the lifting mean activates to raise height of the bed frame. When the bedframe is raised upwards, the bedframe can be locked, and the hospital bed is cleaned easily.
