(57) Abstract :

The present disclosure relates to a commode for generating heat and maintaining hygiene by performing sterilization. The commode includes one or more sensors configured to detect one of presence or absence of a user in a near vicinity of the commode. The commode also includes one or more heating elements configured to heat the seat of the commode at a pre-set temperature. The commode also includes a nozzle configured to perform cleaning operation. The commode further includes a sterilization unit configured to kill germs and sanitize the surface of the commode. The commode also includes a control unit configured to control and maintain all the operations of the commode.
