(57) Abstract :

According to the embodiments illustrated herein, a cabinet (100) for assisting a user to organize garments in the cabinet, so that the garment is easily found in the cabinet. The cabinet (100) has a housing (102) that houses compartments (104), an RFID tag (106) attached to each compartment, and an RFID reader (108) configured to scan the RFID tag in the associated compartment to obtain information regarding type of garments to be accommodated in the associated compartment. In addition, each compartment equipped with an image acquisition unit (110) that captures one or more images of the associated compartment. Further, a processor (202) is programmed to detect if at least one of the garments is in an unsuitable compartment and alert the user to move the garment to a suitable compartment.
