(57) Abstract :

Present disclosure relates a system (100) for automatically detects presence of the at least one user to access a computing device (102). The system (100) comprises a network (102), a computing device (104), a display unit (106), a recorder unit (108), a log unit (110), a task unit (112), a GPS unit 114, a database 116, a microphone 118, a speaker 120, a server 124 and a user 122. The computing device 102 receives input, by the microphone 118. The input includes recording verbal instructions by the user 122 pertaining to a task along with at least one GPS location. Further, the verbal instructions are stored in the database 116 in the form reminders, and generate, in real-time, the reminders automatically when the computing device 104 enters into the radius of the stored GPS-location. Finally, computing device 104 displays reminders using display unit (106) of the computing device (104).
