(57) Abstract :

Systems and methods for implementing blockchain-based cash logistic management are disclosed. The disclosed systems and methods store information for managing cash on a blockchain network (102) having multiple nodes (104). Multiple users 104, including persons from bank branches, central banks, logistic service providers, vehicle drivers, or the like can be communicatively coupled through a decentralized blockchain ledger (302). Additionally, geofencing is used to track location of the vehicle when the cash is loaded into the vehicle till the cash is delivered to the associated bank branch. Furthermore, QR codes being used to make system more secure. Thus, the proposed systems and methods reduce chance of robbery of the cash while the cash in transit.
