(57) Abstract :

Embodiments of the present disclosure may include a system (100) for baggage collection at an exit gate, the system (100) including a wearable (102) having a Radio-frequency identification (RFID) tag (104). In some embodiments, the wearable may be provided to a person entering a premise, upon receiving at least one baggage from the person. Embodiments may also include a pair of gate antennas (106) mounted at the exit gate, and the pair of gate antennas may be configured to read the RFID tag attached to the wearable when person leaves the premise through the exit gate, and correspondingly a speaker (112) activates to emit sound to notify the person to collect baggage from a baggage counter.
