(57) Abstract :
The present invention provides a smart baby car seat comprising a reclining seat to support a user, one or more bottle holders, one or more sensors (110), a repellent device (112), an image acquisition unit (108), and a processor (104) configured in a housing (102). The reclining seat is adjusted to one or more angles for the user to sit or lie. The one or more bottle holders retain the temperature of the content inside. The processor (104) has a memory (106), the memory (106) storing instructions, causes the processor (104) to enable, the one or more sensors (110) to detect bugs and issue an alert. The processor (104) activates, the repellent device (112) to control bugs. The processor (104) uses the image acquisition unit (108) output to determine the emotions of the user, to provide data to one or more mobile devices (118) through a communication terminal.
