(57) Abstract :  
A DATA RETRIEVAL SYSTEM FOR PROVIDING PHYSICIAN DETAILS BASED ON A SKIN AILMENT 5 Approaches for providing profile of a physician based on an ailment associated with an area of a user’s skin are described. In one example, a user query may be received, wherein the user query includes a location of the user and an image of the area of the user’s skin. The area of the user’s skin may further include at least one of a plurality of visual skin characteristics. Thereafter, the 10 location of the user and the plurality of skin characteristics of the image of the area of user’s skin may be extracted from the received user query. Based on at least one of the plurality of extracted skin characteristics, an ailment associated with the corresponding area of the user’s skin may be determined. Thereafter, based on the determined ailment and the extracted location of the user, a profile of 15 a physician may be obtained from a data repository.
