(57) Abstract :

Embodiments of the present disclosure may include a system 100 a system to access and collect forensic evidence remotely, the system including a processor 102 and a memory 104. The processor 102 can be configured to get instruction from a forensic device 112 to create a forensic inquiry to acquire computer evidence from a target device 116. Also, based on the instruction received one or more details of the forensic inquiry from the entity by a user device 114. The processor 102 may be further configured to extract, a set of operations from a dataset stored on a server 110, and transmit it to the user device 114. The processor 102 may also be configured to initiate the selected one or more of the set of operations on the target device 116 from a remote location to acquire data from the target device 116.
